Commercial Contract Advisor, Contract Admin.	Serves in a lead or supervisory role for most assigned job duties, such as customer contracting support / issue resolution, customer training on the contracting process and contracting system, contract administration, contract-related reporting, and contract-related problem resolution and project management. Acts as a liaison between Marketing, Regulatory Affairs, Legal, Credit and other departments with respect to the preparation and administration of new transportation and storage contracts, contract amendments, and discounts and facilitates the implementation of negotiated rate agreements for certain of Enbridge Inc.'s Gas Transmission and Midstream business unit's pipelines and storage facilities. Acts as a liaison between the business community and MIS with respect to the Contracting module of the gas management system. Ensures that new transportation and storage contracts, contract amendments, and discounts are processed in accordance with FERC, SOX and NAESB compliance procedures and controls. Designs, tests, and implements changes to the gas management system contract administration-related programming code. Serves as a key contributor as they participate in regulatory and tariff filings associated with the contract administration process.
Commercial Contract Advisor, Contract Admin.	Serves as a key contributor for most assigned job duties, such as such as customer contracting support / issue resolution, customer training on the contracting process and contracting system, contract administration, contract-related reporting, and contract-related problem resolution and project management. Acts as a liaison between Marketing, Regulatory Affairs, Legal, Credit and other departments with respect to the preparation and administration of new transportation and storage contracts, contract amendments, and discounts and facilitates the implementation of negotiated rate agreements for certain of Enbridge Inc.'s Gas Transmission and Midstream business unit's pipelines and storage facilities. Acts as a liaison between the business community and MIS with respect to the Contracting module of the gas management system. Ensures that new transportation and storage contracts, contract amendments, and discounts are processed in accordance with FERC, SOX and NAESB compliance procedures and controls. Designs, tests, and implements changes to the gas management system contract administration-related programming code. Serves as a key contributor as they participate in regulatory and tariff filings associated with the contract administration process.
Commercial Contract Analyst II, Contract Admin.	Serves as a key contributor for most assigned job duties, such as such as customer contracting support / issue resolution, customer training on the contracting process and contracting system, contract administration, contract-related reporting, and contract-related problem resolution and project management. Acts as a liaison between Marketing, Regulatory Affairs, Legal, Credit and other departments with respect to the preparation and administration of new transportation and storage contracts, contract amendments, and discounts and facilitates the implementation of negotiated rate agreements for certain of Enbridge Inc.'s Gas Transmission and Midstream business unit's pipelines and storage facilities. Acts as a liaison between the business community and MIS with respect to the Contracting module of the gas management system. Ensures that new transportation and storage contracts, contract amendments, and discounts are processed in accordance with FERC, SOX and NAESB compliance procedures and controls. Designs, tests, and implements changes to the gas management system contract administration-related programming code. Serves as a key contributor as they participate in regulatory and tariff filings associated with the contract administration process.
Commercial Contracts Analyst III	This position is the primary Offshore non-tariff representative for commercial contracts providing contracts research, analysis, and occasional drafting. The role will support the Offshore non-tariff contracts for 15 pipelines, three platforms, and two liquids handling facilities owned by Enbridge Offshore entities.

CRM Specialist	Works closely with the Director in the areas of compliance of the Federally-mandated "Control Room Management" requirement as dictated by PHMSA (DOT). This position supports the activities centered on ensuring Enbridge's Control Room Management program is compliant with Federal regulations and control center/controller activities are consistent with stated processes and procedures. Daily job duties will include accuracy review of SCADA graphics, UDC points/descriptors, alarm set points and priorities. Ongoing evaluation and review of all compliance documentation, yearly training on documentation changes and maintains knowledge of changing Federal requirements for the control room.
Customer Service Rep IV	Shift position: handles customer interaction as it pertains to nominations, confirmations, allocations and imbalance management during non-business hours. Also manage interconnect pipeline confirmations and real-time customer imbalance management. Coordinates with Gas Control for effective oversight and implementation of customer nomination changes. Reports to Manager, System Balances. Troubleshoots all customer operational problems/issues and has responsibility to ensure that customers receive timely resolution of all discrepancies involving pipeline services. Responsible for ensuring that physical pipeline flows are in line with scheduled quantities in accordance with Tariff and other contractual guidelines. Job titles are in a line of progression with each subsequent level assuming additional responsibility and capability to manage customer and internal issues.
Director Commercial Operations	Responsible for leading the Capacity Services team that ensures quality customer service in the areas of nominations, confirmations, allocations, and imbalance management for the customers/shippers of Texas Eastern Transmission, Algonquin Gas Transmission, Maritimes and Northeast, East Tennessee, Sabal Trail, Southeast Supply Header, Enbridge Offshore, Vector, Valley Crossing, and Big Sandy pipeline systems and Steckman Ridge, Egan Hub, Moss Bluff and Bobcat Gas storage facilities. Leads Capacity Planning department that is responsible for the accurate posting of operational capacities in compliance with FERC's gas transparency requirements. Team also ensures capacities are generated to ensure efficient and safe operation of Enbridge US pipeline and storage facilities, to meet customer demands and to expand and create marketing opportunities where possible. Leads team that supports the marketing efforts for all new and existing transport and storage transactions including coordination with internal departments. Coordinates marketing efforts with internal groups for the development of creative solutions that will address commercial issues raised by customers. Serves as the voice of the customer with other internal groups while balancing the commercial goals, system operations and objectives of the company

<p>Director, Business Development &amp; Marketing LA/Offshore</p>	<p>Responsible for all commercial activities for the onshore Louisiana, select onshore Texas, and all offshore business interests of the Company. This includes all existing business customer relationships, existing revenue management and extension, and all business development and origination activities. Development of growth projects, including commercial commitments, internal approvals, external authority, and execution. Manages onshore Louisiana, select onshore Texas, and all Offshore business interests. Maintains knowledge of Enbridge’s commercial operations and competitive landscape across US Transmission footprint. Manages business unit planning, forecasting and performance monitoring/reporting. Manages commercial relationships with business unit customers including negotiating transportation agreements and other commercial arrangements. Manages business and market development activities for business units including identifying and advancing expansion opportunities. Manages the coordination of joint ventures entities (e.g. Destin Pipeline) to ensure effective communications with our partner/customer and achieve financial deliverables. Interface with our Energy Department and other marketing personnel to share market intelligence, regulatory changes and identify/develop and execute potential business opportunities. Manage coordination of various project execution initiatives to ensure alignment across the suite of projects in execution – such as changing regulations, emissions, permit and ROW issues. Directs negotiations, deal structures, and strategies on existing assets and new growth or acquisition opportunities. Specific to the offshore team – ensures effective overall coordination of daily service delivery (among field personnel, gas control, and scheduling) and the execution of significant commercial initiatives. Assures adequate and efficient staffing levels with necessary training and skill levels to carry out annual plans. Ensures internal processes are aligned, including support activities and that resources are in place to facilitate the capture of new business growth opportunities. Represents the business externally in various customer, industry and regulatory agency forums. Fosters and maintains high level industry relationships with key current and prospective customers.</p>
<p>Director, Business Development &amp; Marketing, South Texas</p>	<p>Responsible for all commercial activities for gas pipeline and storage business interests of the Company in Texas including serving Mexico. This includes all existing business customer relationships, existing revenue management and extension, and all business development and origination activities. Development of growth projects, including commercial commitments, internal approvals, external authority, and execution. Maintains knowledge of Enbridge’s commercial operations and competitive landscape across US Transmission footprint. Manages business unit planning, forecasting and performance monitoring/reporting. Manages commercial relationships with business unit customers including negotiating transportation agreements and other commercial arrangements. Manages business and market development activities for business units including identifying and advancing expansion opportunities. Manages the coordination of joint ventures entities to ensure effective communications with our partner/customer and achieve financial deliverables. Represents the business externally in various customer, industry and regulatory agency forums. Fosters and maintains high level industry relationships with key current and prospective customers.</p>
<p>Director, Commercial Services</p>	<p>Leads the Commercial Services team which markets storage and transportation services to marketer, producer and power generation accounts for Enbridge's Gas Transmission and Midstream pipeline system.</p>
<p>Director, Customer Administration / LINK Systems</p>	<p>Responsible for overall management of the customer interface system and the transportation and storage contract administration process for Enbridge's Texas Eastern Transmission, Algonquin Gas Transmission, Maritimes and Northeast, East Tennessee, Sabal Trail, Southeast Supply Header, Enbridge Offshore, Vector, Valley Crossing and Big Sandy pipeline systems.. Provide quality customer service by ensuring that customer interface system performance is adequate; the customer interface system is programmed accurately; and new transportation and storage contracts, contract amendments, and discounts are processed accurately and efficiently. Ensure that the associated processes and systems are effectively designed and functioning properly in order to support financial (SOX) and regulatory (FERC / NAESB) compliance.</p>
<p>Director, Gas Control</p>	<p>Responsible for the 24X7 real time gas control operation for Enbridge's Texas Eastern Transmission, Algonquin Gas Transmission, Maritimes and Northeast, East Tennessee, Sabal Trail, Southeast Supply Header, Enbridge Offshore, Vector, Valley Crossing, and Big Sandy pipeline systems.. This includes the safe and reliable delivery of the daily scheduled quantities through the real-time operation of compressor stations, pipeline facilities, and storage facilities.</p>
<p>Engineer II Capacity Planning</p>	<p>Uses pipeline simulation and optimization tools and receipts/delivery data to calculate/publish Spectra Energy Partners pipeline operational capacities at the compressor station level. Provide operational data to internal customers. Advises MHP the optimized operation to achieve fuel efficiency based on hydraulic simulation. Advises storage expansion projects. Manages Spectra Energy Partners' storage inventory on both physical and customer basis. Coordinates outages related to storage facilities. Generates customized monthly and weekly pipeline flow and storage inventory reports for accounting, regulatory and management. Maintains and updates storage-related data published to internal or external customers such as in DSS and Storage Inventory Management database.</p>

<p>Engineer Specialist, System Planning Gas</p>	<p>The Engineer Specialist has responsibility for effectively responding to the needs of clients, including Business Development, Marketing Services, Engineering and Construction, Regulatory, Legal and Transmission, as well as work with Enbridge's pipeline customers and vendors as necessary to further Enbridge's business goals. The Engineer Specialist provides technical support to internal groups through hydraulic modeling of the various pipelines to determine incremental facilities, operational capacities and obtain or predict operational information such as system pressures, volumes, and temperatures. Provides technical direction in the selection of pipeline routing, compressor station or meter station sites, compressor sizing and selection, pipeline sizing and other items as necessary based upon system designs and institutional knowledge.</p>
<p>Engineer, Asset Planning</p>	<p>Responsible for hydraulic design and analysis of pipeline facilities to support incremental and ongoing business and operations for the company. Interacts with numerous groups including Business Development, Marketing, Project Development, Regulatory Affairs, Legal, Engineering &amp; Construction, Transmission, Gas Control, Environmental and Codes groups to assist in the detailed design of facilities from the conceptual stage to FERC application and through completion of construction and commissioning. Assists with operational issues such as fuel and electric power tracking. Assists with operational issues such as outages and efficiency studies to aid in optimizing the pipeline assets.</p>
<p>Engineer, Capacity Planning</p>	<p>Uses pipeline simulation and optimization tools and receipts/delivery data to calculate/publish Spectra Energy Partners pipeline operational capacities at the compressor station level. Advises gas control the optimized operation to achieve customer nomination. Maintains and monitors pipeline system fuel and electricity cost. Maintains and updates pipeline system line pack. Advises MHP the optimized operation to achieve fuel efficiency based on hydraulic simulation. Advises storage expansion projects. Manages Spectra Energy Partners' storage inventory on both physical and customer basis. Coordinates outages related to storage facilities. Generates customized monthly and weekly pipeline flow and storage inventory reports for accounting, regulatory and management. Maintains and updates storage-related data published to internal or external customers such as in DSS and Storage Inventory Management database.</p>
<p>Gas Control Specialist I</p>	<p>Monitor the Control Center to ensure the safe and efficient operations of the Enbridge pipeline systems. Make decisions related to operational changes or maintenance activities impacting the pipelines, and ensure communication of such to the Controllers. Provide technical expertise and solutions to specific issues that arise during the shift. Ensure Enbridge is compliant with company policies and government regulations required by PHMSA based on Control Room Management.</p>
<p>Lead Capacity Scheduling and Volume Management</p>	<p>Responsible for the management of aggregate capacity and customer usage on the pipeline system. Lead the daily scheduling of the pipe and coordination between customer usage and operational availability of capacity. Posts critical capacity notices and monitors informational postings to assure accuracy of the information. Manages system outages, both planned and unplanned, coordinating restrictions with applicable customers and posting relevant information so that compliant customer communication is assured. Troubleshoots customer operational problems/issues and has responsibility to assure that customer receives timely resolution to all discrepancies involving pipeline services. Coordinate group activities related to project/regulatory/financial support: annual filings, special projects and initiatives, and tariff compliance as directed by the Manager of Capacity Scheduling. Coordinate all training for new hires into the group</p>
<p>Lead, System Planning Gas</p>	<p>The Supervising Engineer manages an Asset Planning engineer or engineers responsible for an Enbridge regional asset or assets to accomplish business goals. The Supervising Engineer has responsibility for the supervision, management, leadership, direction and overall success of the assigned group in effectively responding to the needs of clients, including Business Development, Marketing Services, Engineering and Construction, Regulatory, Legal and Transmission, as well as work with Enbridge's customers and vendors as necessary to further Enbridge's business goals.</p>

<p>Manager Capacity Services</p>	<p>Manages a team that is responsible for customer transactional activity and problem resolution. Coordinates and resolves issues between internal and external customers as they arise in a timely and effective manner. Works with team to coordinate and implement enhancements with the LINK system; identify efficiencies through continuous process review and respond to changes in nominations, allocations, confirmations and other processes performed by Capacity Services. Assures compliance with SOX controls as applicable to the group.</p>
<p>Manager Gas Control (Central)</p>	<p>The Manager of Gas Control covers the position for potentially each pipeline; Texas Eastern, East Tennessee, Algonquin, Maritimes &amp; Northeast, Southeast Supply Header, Valley Crossing, Nexus, Offshore and Big Sandy Pipeline. The principal objective of this position is to optimize the pipeline facilities through subordinate levels of gas controllers controlling the real-time operation of compressor stations, pipeline facilities to maximize the volumes handled in the most economical method. This requires 24 hour supervision of system requirements, storage field operations, and monitoring of compressor stations to achieve safe, reliable operations. Even though this position may be required to supervise Southern operations, this position is responsible primarily for SESH, East Tennessee, Offshore, NEXUS, Sabal Trail and Vector. Seven years of gas control or equivalent industry experience. Experience with electronic data acquisition and control systems and one year field experience in oil and gas industry preferred. Experience on each pipeline in order to supervise day-to-day operations such that efficiency and pipeline integrity are maintained in accordance with customer expectation.</p>
<p>Manager System Planning (Gas)</p>	<p>Responsible for the leadership and direction of the System Planning Gas group. The group's main functions are to develop the conceptual design, regulatory support and competitive analysis for existing and proposed system expansion projects on Enbridge's and Spectra Energy Partners' pipeline systems (TETLP, AGT, ETNG, M&amp;N US, NEXUS, Sabal Trail, Big Sandy, Alliance US, Manta Ray, Nautilus, Mississippi Canyon, Garden Banks, Valley Crossing), and the hydraulic design and maintenance of customers' entitlements on all pipeline systems, including design and unsubscribed capacity postings.</p>
<p>Manager U.S Marketing Southern Region</p>	<p>The Manager of U.S. Marketing, Southern Region provides leadership to the Marketing team and works within cross functional team to ensure accomplishment of the Company's commercial goals for specifically the East Tennessee Natural Gas, Saltville Storage, Highlands Pipeline, and Big Sandy Pipeline assets. Supports the Director U.S. Marketing, Southern Region in the development of strategic planning and initiatives. Responsible for initiation and coordination of all activities relating to existing business relationship management with both the customer base and internal departments for the specified assets. Responsible for maintaining and fostering relationships with existing customers, including managing and renegotiating existing agreements, marketing new services and expanding sales to existing customers. Identifies and develops new customers for the company's products and services. Leads existing Marketing team in support of these activities. Coordinates with several internal departments, including but not limited to – Regulatory, Legal, Commercial Operations, Field Operations, Capacity Services and Scheduling, Gas Control, Business Development, System Planning, and Economic Evaluation to ensure the company's commercial objectives are achieved and the commercial strategy is implemented effectively. Organizes and leads several customer events on location throughout each year (i.e. recurring customer events). Actively participates in industry associations to develop new customer and supplier relationships. Assists Director in the development of short and long-term team goals, budgets and strategies. Special projects on an as needed basis</p>

<p>Manager, Capacity Planning</p>	<p>Managing capacity planning group with several engineers, serving as liaison among gas control, regulatory, system planning, technical service, capacity scheduling, marketing and region, to ensure efficient and safe operation of Enbridge's pipeline system and storage facilities, to meet customer demands and to expand and create marketing opportunities. Hydraulic modeling for all Enbridge's US pipeline systems, providing operational capacities and operational cost optimization. Managing and operating all Enbridge's US storage facilities in terms of day to day inventory movement, fuel cost, outage planning, expansion projects, help marketing capture revenue opportunities. Managing online IT system to publish operational data to internal and external customers. Assist system planning and Engineering/Construction in expanding our pipeline/storage facilities.</p>
<p>Manager, Contract Admin.</p>	<p>Responsible for the overall management of the transportation and storage contract administration process for certain of Enbridge Inc.'s Gas Transmission and Midstream business unit's pipeline and storage facilities. Includes responsibility for the compliance (FERC and SOX) and administration of new transportation and storage contracts, contract amendments, and discounts. Facilitates the resolution of inconsistencies between different pipeline and storage entities with respect to transportation, storage and discount contract administration systems, processes, and tariff language, in order to ensure the most efficient compliance and control mechanisms. Serves as a primary customer interface on complex contractual issues, such as those involving questions associated with net present value calculations, and contractual rights of first refusal. Oversees the design, testing, and implementation of changes to the pipeline and storage system contract administration-related programming code.</p>
<p>Manager, Gas Control (North)</p>	<p>The Manager of Gas Control covers the position for potentially each pipeline; Texas Eastern, East Tennessee, Algonquin, Maritimes &amp; Northeast, Southeast Supply Header, Valley Crossing, Nexus, Offshore and Big Sandy Pipeline. The principal objective of this position is to optimize the pipeline facilities through subordinate levels of gas controllers controlling the real-time operation of compressor stations, pipeline facilities to maximize the volumes handled in the most economical method. This requires 24 hour supervision of system requirements, storage field operations, and monitoring of compressor stations to achieve safe, reliable operations. Even though this position may be required to supervise Southern operations, this position is responsible primarily for TE/M3, AGT and Maritimes and Northeast pipelines. Seven years of gas control or equivalent industry experience. Experience with electronic data acquisition and control systems and one year field experience in oil and gas industry preferred. Experience on each pipeline in order to supervise day-to-day operations such that efficiency and pipeline integrity are maintained in accordance with customer expectation.</p>
<p>Manager, Gas Control (South)</p>	<p>The Manager of Gas Control covers the position for potentially each pipeline; Texas Eastern, East Tennessee, Algonquin, Maritimes &amp; Northeast, Southeast Supply Header, Valley Crossing, NEXUS, Offshore and Big Sandy Pipeline. The principal objective of this position is to optimize the pipeline facilities through subordinate levels of gas controllers controlling the real-time operation of compressor stations, pipeline facilities to maximize the volumes handled in the most economical method. This requires 24 hour supervision of system requirements, storage field operations, and monitoring of compressor stations to achieve safe, reliable operations. Even though this position may be required to supervise Southern operations, this position is responsible primarily for TETLP (Central and Southeast Region), Valley Crossing and Big Sandy. Seven years of gas control or equivalent industry experience. Experience with electronic data acquisition and control systems and one year field experience in oil and gas industry preferred. Experience on each pipeline in order to supervise day-to-day operations such that efficiency and pipeline integrity are maintained in accordance with customer expectation.</p>

Manager, LINK Systems	Responsible for overall management of the customer interface system for certain of Enbridge Inc.'s Gas Transmission and Midstream business unit's pipeline and storage business. Includes responsibility for designing (conceptually), testing, and implementing changes to the pipeline and storage system programming code; monitoring and maintaining pipeline and storage system performance (speed) and quality (accuracy); analyzing and addressing customer pipeline and storage system support issues; developing, organizing and conducting pipeline and storage system training events for internal and external customers; and monitoring and testing the pipeline and storage system to ensure compliance with FERC, SOX, and NAESB rules / objectives.
Manager, Measurement and Gas Quality Assurance (Measurement Integrity)	Responsible for the monitoring and validation of the gas quality function for the Enbridge U.S. pipeline and storage assets. This includes both gas quality as it pertains to the measurement function and the monitoring for constituents that adversely affect the operation of the Enbridge assets. Responsible for the measurement business systems and the day to day validity of the measurement data.
Manager, Scheduling & Volume Management	Manages the Scheduling and Volume Management groups responsible for the scheduling of the Enbridge US pipelines after timely nominations. Manages the postings of pipeline outages and works closely with Capacity Planning, Capacity Services and Commercial Services on the day-to-day prioritization of services and the effect of capacity restriction on the nominations. Also, responsible for Volume Management shift teams.
Representative IV, Commercial Services	Responsible for managing commercial relationship with several of Enbridge's largest Offshore customers. Builds relationships with assigned customers that result in the company meeting revenue targets. Resolves issues that might arise relating to: revenue billing; nominations and scheduling; credit; operations; rates and certificates and other commercial issues. Works with internal groups for the development of creative solutions that will address commercial issues raised by customers. Serves as the voice of the customer with other internal groups while balancing the commercial goals and objectives of the company and handles Business Development efforts for Offshore development.
Representative IV, Producer and Marketer Services	Responsible for Producers, Power Providers, End Users, Local Distribution Companies and Investment banks across all of the Enbridge's Gas Transmission & Midstream pipelines and storage facilities. Account management includes the sale of transportation and storage capacity, resolution of all customer operational problems/issues, and responsibility to assure that customer receives timely resolution to all discrepancies involving pipeline services. Job titles are in a line of progression with each subsequent level assuming additional responsibility and capability to manage customer and internal issues.
Representative IV, US Marketing	Responsible for Producers, Power Providers, End Users, Local Distribution Companies and Investment banks across all of the Enbridge's Gas Transmission & Midstream pipelines and storage facilities. Account management includes the sale of transportation and storage capacity, resolution of all customer operational problems/issues, and responsibility to assure that customer receives timely resolution to all discrepancies involving pipeline services. Job titles are in a line of progression with each subsequent level assuming additional responsibility and capability to manage customer and internal issues.
